Project Name: Medical Inventory Management

Proposed Solution

The proposed solution is a Salesforce-based application that streamlines medical inventory management. It will maintain detailed supplier records, automate purchase order processing, and track product expiry and stock levels. Through dashboards and reports, it provides real-time insights for decision-making.

Key Features:

Automated tracking of inventory levels and expiry dates.Supplier and purchase order management.Custom validation rules for data accuracy.Reports and dashboards for real-time monitoring.User roles, profiles, and permissions for secure access.

Technology Stack:

Salesforce CRM, Lightning App Builder, Apex Triggers, Flow Automation, and Reports/Dashboards.
